PROFESSIONAL SUMMARY

Senior Salesforce Engineer with 7+ years of experience delivering scalable Apex, Lightning Web Components (LWC), and enterprise integration solutions across global CRM implementations — including hands-on Contract Lifecycle Management (CLM), quote-to-cash workflows, and multi-country deployments. Expertise in Salesforce architecture, order of execution, governor limit optimization, and REST/SOAP API integrations. Currently building agentic AI systems including a self-correcting Retrieval-Augmented Generation (RAG) pipeline. Actively leveraging GitHub Copilot and Cursor to accelerate delivery velocity.

TECHNICAL SKILLS

Salesforce Platform: Apex (Synchronous & Asynchronous) • Lightning Web Components (LWC) • Aura Components • Apex Triggers • Async Apex • Salesforce Flows • Platform Events • Change Data Capture (CDC) • Validation Rules • Sharing Models • Governor Limits & Optimization • Order of Execution

Contract Lifecycle Management: Salesforce CPQ • Revenue Cloud (RLM) • Quote-to-Cash Workflows • Contract Approvals • Subscription & Renewal Automation

Integrations & APIs: REST APIs • SOAP APIs • JSON • XML • SAP Integrations • Enterprise System Integrations • Data Synchronization Patterns • Postman • Workbench

AI Developer Tools: GitHub Copilot • Cursor • Amazon CodeWhisperer • ChatGPT / Claude for code review

AI & Machine Learning: LangGraph • LangChain • Retrieval-Augmented Generation (RAG) • Vector Databases (ChromaDB) • Prompt Engineering • Structured Output (Pydantic) • LLM Evaluation & Grading • OpenAI API • Model Context Protocol (MCP) • Agentic Workflows • Classification Models • Model Explainability (SHAP, LIME) • Fairness & Bias Analysis

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM) • GitHub Actions • Git • Maven • Salesforce CLI • Sandbox Environments • Agile

Web & Programming: Python • JavaScript • HTML • CSS • SQL • SOQL • SOSL

Analytics & Data: KPI Dashboards & Reporting • Data Mining • Data Modeling • Data Warehousing • Business Intelligence • Evidence-Based Decision Making

PROFESSIONAL EXPERIENCE

Technical Support Engineer — Salesforce Platform

Salesforce

Dec 2022 – Dec 2024

Hyderabad, India

- Resolved complex production issues across Apex, LWC, and integrations for 24+ enterprise clients — leveraging deep understanding of Salesforce architecture, order of execution, and governor limits.
- Led Severity-1 incident triage and root-cause analysis using Apex Log Analyzer, Query Plan Tool, and Event Monitoring to optimize performance and system stability.
- Partnered with Engineering to identify systemic product gaps in automation, integrations, and Contract Lifecycle Management workflows — driving defect fixes that reduced repeat escalations.
- Mentored 15+ engineers through structured Apex/LWC training and hands-on case shadowing, accelerating team ramp-up and technical proficiency.
- Analysed Salesforce seasonal releases to identify high-value features and drive proactive customer adoption strategies.

Salesforce Developer

LTIMindtree — Client: Carrier Global

Apr 2021 – Dec 2022

Hyderabad, India

- Designed and implemented Contract Lifecycle Management (CLM) solutions on Salesforce — building contract data models, approval workflows, renewal automation, and clause-management Apex triggers to support Carrier Global's multi-country contract operations.
- Developed custom Apex classes, triggers, and Lightning Web Components across Sales Cloud and Service Cloud — writing clean, well-documented code aligned with platform best practices and design patterns.
- Architected enterprise integrations between Salesforce and SAP using REST and SOAP APIs (JSON, XML) — ensuring secure, high-performance data exchange across multi-country processes.
- Built AI-driven workflows leveraging Salesforce Einstein and Agentforce for intelligent recommendations and automation.

- Owned end-to-end resolution of high-impact production issues — performing root-cause analysis across Apex, LWC, integrations, and security configurations.
- Coordinated multi-country Salesforce releases and CLM deployments — managing ITIL-based change approvals, CAB reviews, and deployment schedules (Agile/Scrum).

Salesforce Developer / Administrator

Dec 2017 – Mar 2021

Zensar Technologies — Client: Vyaire Medical

Pune, India

- Developed custom Apex classes, triggers, and Lightning components to automate business processes and enforce data integrity across Sales Cloud and Service Cloud.
- Designed and implemented Single Sign-On (SSO) and authentication integrations — strengthening enterprise security posture and user access management.
- Executed enterprise data migration from legacy systems to Salesforce with validation controls and approval workflows to ensure integrity and compliance.
- Optimized business workflows through Salesforce Flows, automation rules, and validation logic — improving operational efficiency for global users.

EDUCATION

The University of Texas at Arlington

Aug 2026

Master of Science in Information Systems

Arlington, TX

Relevant Coursework: Cloud Computing (AWS) • Python Programming • Data Warehousing & Business Intelligence • Data Mining • Advanced Methods for Analytics • Project Management • Enterprise Resource Planning (SAP) • Analysis & Design

Keshav Memorial Institute of Technology

May 2017

Bachelor of Engineering in Computer Science

Hyderabad, India

CERTIFICATIONS

Salesforce Certified Administrator • Advanced Administrator • Platform Developer I • Platform App Builder • Service Cloud Consultant • Experience Cloud Consultant

KEY PROJECTS

Agentic RAG — Ticket-to-Knowledge Feedback Loop

An agentic RAG system that keeps knowledge articles continuously current — resolved tickets flow back into the knowledge base so future queries retrieve the latest, most accurate information.

- Built a Corrective RAG pipeline using LangGraph, ChromaDB, and OpenAI API — with self-grading retrieval, automatic query rewriting, and human-in-the-loop fallback for low-confidence answers.
- Designed the system so newly resolved support tickets are automatically pushed back into the knowledge base, ensuring Agentforce and other consumers always retrieve the most recent context — reducing duplicate cases and stale documentation.

AI Bias Audit Platform — Recidivism Risk Scoring

End-to-end ML solution with fairness auditing and model explainability.

- Built classification models (Logistic Regression, Random Forest) achieving ~0.79 ROC-AUC; performed fairness auditing with SHAP and LIME, identifying ~3× disparity across demographic groups. Deployed via Streamlit.

Met Museum Art Recommender — Full-Stack ML Recommendation System

A real-world recommender for anyone who's ever felt lost in a museum — built to make discovery feel personal.

- Built end-to-end recommender: API data collection, feature engineering (315 features via TF-IDF + one-hot encoding), Random Forest classifier, and SHAP-based explainability for transparent, auditable recommendations.

VOLUNTEERING

Community Outreach Specialist — Empowering Our Minds

Feb 2026 – Present

- Lead community outreach initiatives to expand access to mental health awareness, education, and peer support — partnering with local networks and volunteers to design and deliver programs that connect people with the resources they need.
